Assignment #: 13

Topic : File Handling

Level 1: Easy

1. Write a program to find the longest word in a text file.
2. Write a program to get specific files by extensions from a specified folder.
3. Write a program to check whether a file or directory specified by pathname exists.
4. Write a program to get the last modified time of a file.
5. Write a program to read a file line by line and store it into a variable.

Level 2: Medium

1. Write a program to accept an option, string, and file name using a command line argument.

Perform the following operations:

- a. If no option is passed then print all lines in the file containing the string.
 - b. If the option passed is -c, print the count of lines containing the string.
 - c. If the option is -v, print the lines not containing the string.
2. Janu wants to record her daily Sugar level before meals in the morning in a file on a day-to-day basis and she wants to check her health on a monthly basis. Help her to maintain the Fitness file. Your application should read the contents of the file and give a consolidated status/report about her health in the given format:

Example:

Date	Sugar Level	Status
26-07-2021	100	Normal

Calculate States based on the following condition:

If Sugar level between 90 and 110 then print normal
Else up normal

3. Write a menu driven program to perform the following operations on a text file "Items.txt" which contains mobile phone model and cost as pairs. The menu should have options:
 - i. Search model whether it is present or not

- ii. Add a new model-cost pair.
- iii. Update the cost of a model
- iv. Find the costliest item
- v. Display the stock of items
- vi. Create two files to maintain daily sales and monthly sales. Record daily sales and monthly sales with dates.

Level 3: Hard

1. Rose is maintaining a file to record her daily and monthly expenditure statement. She frequently forgets the location where she has saved the file. So, she wants to build an application that can help her to do the following activities
 1. Check whether the file exists or not.
 2. If so, get the path of the file.
 3. Create a soft link to that file.
 4. Ensure the file is readable and writable.
 5. Enter the expenditure details for the particular month.
 6. Once that particular month is over, copy/move the file to some other directory.
 7. Create another file for the present and make the entries for the present month.
2. Coimbatore Municipality needs to create an application to keep track of Covid vaccination status of an area. In order to maintain and check the status, they are maintaining following files.
 - a. list of people staying in an area with mobile number
 - b. list of 1st dose vaccinated people
 - c. list of 2nd dose vaccinated people.

The process is as follows,

Whenever a person gets his/her vaccination newly, his/her details must be moved from total list to 1st dose list. Similarly, whenever a person from 1st dose list gets his/her 2nd dose vaccination then move the record to 2nd dose list.

So, in order to maintain and keep track of vaccination status of an area, help our municipality by creating an application.
